

**REV Used to Save High School Athletic Fields  
Enterprise High School  
Enterprise, AL**

Enterprise, AL was devastated by tornados . The Enterprise High School was destroyed in the process. The school needed to establish new athletic fields. Tif Sport Bermuda spriggs were used to establish fields on native soil. After not successfully establishing Phil Green, Dr. Dirt, of Sport Turf Supply was called in to consult on the struggles.

A soil sample was sent in to DAKOTA Analytical, Inc. for evaluation. Based on the testing data, Dr. Dirt started a liquid fertility program with REV PTF6000 Liquid as an integral part. As shown below, the fields had an incredible turnaround in one months time.

Athletic Fields in need of help

Week One REV Fertility and Cultivation Program

Week Four - Ready for Play

REV was instrumental in encouraging and stimulating the Tif Sport Bermuda to spread and root into the native soil.

Dr. Dirt is available to answer questions on how this REV Program was administered.
