

REV In-Furrow Significantly Boosts Yield

Darryl Kreuger of DRK Farms in Welcome, MN is no stranger to good results with REV. In 2014, his REV-treated acres did so well he decided that in 2015 he would test REV as an in-furrow treatment on his non-GMO soybeans after treatment for the majority of his farm. Just to be sure, he also left a section of his farm for REV-based foliar applications only and another section where REV was not applied at all.

The significant differences in the yields are shown below.

Number of Acres	Application Rates	Yield Per Acre
2.5	No REV applications	45 bu.
2.5	2 foliar sprays at ½ qt. each	50 bu.
145	1 qt. in-furrow with 5 gal. of water and 2 foliar sprays at ½ qt. each	60 bu.

In addition to greater yield, Darryl also had his soybeans tested for oil and protein. The REV treated beans scored 21.6 for oil and 42.2 for protein, 1.5 and 2 points higher respectively, than the beans of farmers around him.

Glacial Lake Organics is owned and operated by father-son team Doug and Cap Richards. For more information or to order, please call Cap at (507) 216-1061 or Doug at (507) 358-4600. Their email is Richards@revuporganics.com.
