

Schumacher Farms | Reynolds, ND

Mark Schumacher of Reynolds, ND, called Dakota Peat two years ago and ordered a tote of REV which he applied in-furrow on one-half of his soybeans. By the end of the season, he noticed quite a difference – taller plants and greater yield.

Last year, he applied REV in-furrow at 1 quart per acre on his entire farm, and saw better yield and test weights of 59.3 lb. soybeans – his best ever.

“From here on out, I’m using REV wall-to-wall on my farm,” says Schumacher. “I’m done with testing. I know I will keep getting healthier plants and a better yield.”
